

# Solutions Training

Kelros training and education services offer an effective education strategy, which could prove critical to the success of your organisation's technology implementation.

In many cases, sending staff on to public, scheduled courses can be seen as the most cost-effective solution to an educational need but we believe there are many other training options that can be highly effective in your organisation and may deliver a better return on your training investment.

Our education offerings and certification programs are designed for companies large and small to help customers take full advantage of technology investments to improve business processes.

We offer bespoke solutions for your training and educational needs, from one-off learning sessions at a single location, to nationwide programmes of courses for staff in multiple locations. Courses can be delivered at our training centre or on customer site.

We run standard user courses at both introductory and advanced levels (including 65 IBM training courses) but can also fully customise the contents to your requirements if you have a specific need. We can design and deliver courses appropriate for system users, system administrators or application developers.

We also offer skills transfer workshops and desk-side support for our clients at key times.

To identify the most appropriate training option, we will work with you to consider various factors such as the training objectives and needs, the number and variety of learners involved, timescales, budgets, and delivery logistics.

In many cases, sending staff on to public schedule courses can be seen as the most cost-effective solution. However, there are many other training delivery mechanisms that can also be highly effective in your organisation, and may bring better return on your training investment.
