

Infrastructure as a Service with SoftLayer

Kelros is working to deliver a new breed of self-service, high-performance Infrastructure as a Service (IaaS) offerings for the most demanding cloud applications. Our customers can now benefit from unparalleled performance and control in the cloud through **SoftLayer**.

Innovative customers are now able to build their applications directly into the SoftLayer global cloud infrastructure, to take advantage of an environment that is optimised for born-on-the-cloud applications at internet scale.

Kelros can facilitate self-service provisioning for both virtual and dedicated bare metal servers - with deployment in minutes for virtual servers and just hours for customised dedicated bare metal.

SoftLayer IaaS from Kelros delivers the control and flexibility you need to power your most demanding cloud applications.

For a demonstration and details on support, training and licensing for **SoftLayer**, please [contact us](#). Alternatively, please use the [Demo Request Form](#) to request a demo and to have a Kelros consultant contact you today.
