

# Softlayer

Softlayer is a powerful and reliable infrastructure software which supports and underpins cloud platforms such as Bluemix. It provides a wide range of cloud computing options which are then integrated and automated.

<b>SoftLayer benefits</b>	 <p>Our flexible upfront pricing by the hour or the month oncludes storage, bandwidth and support for total visibility.</p>	 <p>Bare metal servers provide consistent, reliable performance with the ability to scale up or down as needed.</p>	 <p>See and control your cloud through one API, web portal, and set of mobile apps.</p>
---------------------------	--	---	--

By using Softlayer for your cloud infrastructure services, your business can benefit from the following:

- One platform to serve data centres worldwide
- The highest performing cloud infrastructure available
- Three classes of storage - object, block and file
- Workloads in the cloud
- Estimated monthly charge

In real terms this means a great deal to your organisation and its bottom line:

- Visibility of charges facilitates financial planning and budgeting
- High performance equals reassurance that your cloud platforms will be well supported and the software is reliable
- Softlayer supports the Bluemix cloud platform which delivers flexibility and functionality to your developers

## Why Kelros for Softlayer?

Kelros work with around 120 clients of varying sizes operating in a range of industry sectors. We have particular expertise in cloud based infrastructures and are keen for our clients to reap the benefits of using this format of software.
